Online version

CTO and full-stack engineer with 16 years of experience, 9 of them leading engineering, taking products from idea to production. Co-founded Made In Tracker, a deeptech startup, and built MD Atlas, a medical-device regulatory search engine with **110,000+ users** across 170 countries. Hands-on across architecture, data pipelines, agentic AI tooling and team leadership.

Experience

2023/03 – present
Toulouse, France
(remote)

Co-founder & CTO — Made In Tracker

Traceability and regulatory data software for the medical-device industry. Labelled deeptech startup; €90k from angel investors and €90k in public funding; 1 patent; valued at €1.7M by an independent expert in 2026.

- Built MD Atlas (md-atlas.com), a regulatory intelligence search engine for medical devices: **5.2M records** (companies, devices, certificates, people, documents) kept fresh by crawlers of public databases, with conformity alerts and feed monitoring; 110,000+ users across 170 countries.
- Launched EasyUDI, a B2B SaaS for UDI and EUDAMED compliance (GS1 labels and DataMatrix, XML validation, audit trail): **14 customers** and €40k revenue.
- Chose a strongly typed, well-tested stack driven through MCP (TypeScript, Supabase, Vercel, Nix on NixOS) for agentic development: shipped MD Atlas in **2 months** instead of 2 years for 6 developers before AI. Its MCP server, listed in the official MCP Registry, lets AI agents query EU regulatory data; the EasyUDI chatbot assists with workflows.
- Took R&D to pilots with Anopa (cotton) and SobraBTP (construction reuse): product passports, smart labels, secure QR codes and Artwork Passport (AI-assisted registration). 1st place at the Axone blockchain contest.
- Built and led a team of **up to 8** (about 20 people since 2023) and coached 12+ developers. Owned architecture, code review, infrastructure and client integrations; worked with design, sales and investors.

Stack: TypeScript, React, Flutter, Python, PostgreSQL/Supabase, Firebase/GCP, Vercel, Docker, Nix, LLM/RAG, MCP

2017/05 – 2023/02
Osaka, Japan / remote

CTO — YAOYA Inc.

- Rewrote Reach@, the company's content service, from PHP/jQuery to Django/Wagtail, MySQL and Kubernetes: 2,000+ articles a month, **¥100M+** yearly revenue.
- Led product engineering through three iterations of GOunite (internship marketplace, online school, metaverse community) on GRANDstack (React, Apollo, TypeScript, Neo4j) and Pixi.js.
- Led a department of 4 developers and 25 interns, and supported other divisions with automation, data backups and client website audits.

2016/02 – 2016/12
Osaka, Japan

Senior Full-stack Developer — ShareWis Inc.

- Led EdTech products: the ShareWis ACT MOOC marketplace (Ruby on Rails, i18n, payments), React Native apps for ShareWis ACT and ShareWis snack (authentication, payments, premium features), and a Serverless account API.
- Built a Node.js automation linking AWS, Pivotal Tracker, GitHub and Slack; led the internationalisation effort.

2015/09 – 2016/02
Osaka, Japan

Software Engineer — Rakuten

- Kicked off the large-scale PHP/Symfony migration of O-net, Japan's largest marriage agency (43,500+ members), and ran a security audit.

2014/06 – 2015/09
Kobe, Japan

Engineer — Alpaca.ai (formerly Ikkyo Technology)

- Designed the core of the AlpacaDB platform, released as Labellio, a deep-learning image labelling and training service (Kubernetes, Docker, Django, Caffe, RabbitMQ).
- Delivered computer-vision R&D for major Japanese gaming and search companies; backend of Iromo, a fashion search engine matching clothes by colour and pattern.

2011/04 – 2014/08
Okinawa, Japan

Director of Technology, Software Engineer — Aquasys

Director of Technology (2012/11 – 2014/08), Software Engineer (2011/04 – 2012/11)

- Supervised all technical operations; hired, trained and managed freelancers; built a Django marketplace framework (Uruma-work) and administered Odoo.

2010/07 – 2011/03
London, UK

Django Developer — Fry-IT

- Built a Django e-portfolio for London hospitals (PostgreSQL, Celery, RabbitMQ) using TDD.

Skills

Leadership	technical strategy, architecture, hiring and coaching, product scoping, investor relations
Stack	TypeScript, JavaScript, Python, Dart; React, Node.js, Flutter, Django
Data & AI	PostgreSQL, Supabase, Neo4j, LLM/RAG, MCP, AI agents, computer vision
Infrastructure	GCP, Firebase, Vercel, AWS, Docker, Kubernetes, Nix, CI/CD
Practices	TDD, DDD, Lean Startup, code review, agentic coding (Claude Code)

Languages

French (native) · English (bilingual) · Japanese (professional)

2006 – 2011

Education

SUPINFO International University — International Master of Science in Computer Science (studied in France, Canada, the UK and the USA)

Certifications

Wharton Entrepreneurship specialisation (2016)
Stanford Machine Learning (2011)

Interests

Triathlon, ultra-marathon, child education, dog training, chess
